**AI ENGINEER**
**SOFTWARE ENGINEER**
**COMPUTER VISION ENGINEER**

## SUMMARY

Final-year ICT student at USTH with hands-on experience in industrial AOI inspection, computer vision, and backend engineering. Completed a 3-month NVIDIA SMT ME AOI internship at Foxconn and developed AI-powered systems including PCB defect detection platforms, sign-language translation gloves, and machine-learning inference services.

## SKILLS

**Programming**
Python, C++, JavaScript

**AI/CV**
YOLOv8, PyTorch, TensorFlow, Scikit-Learn

**Backend**
FastAPI, PostgreSQL, REST APIs, WebSocket

**Frontend**
React, TypeScript

**Infrastructure**
Docker, Linux, Kubernetes

**Soft Skills**
Team Working, Multilingual, System Design

## AWARDS & ACTIVITIES

FIRST PRIZE
**APEC Innovation 2025–2026**
May 18th 2026

Consolation Prize
**USTH Student Scientific Research Competition**
August 2025

Certificate of Appreciation of Coordination
**President Emmanuel Macron Visit USTH**

Consolation Prize(English)
**VNU English Olympiad**

## EDUCATION

**University of Science and Technology of Hanoi(USTH)**
Hanoi, Vietnam
Bachelor of Information and Communication Technology
August 2023 - August 2026

## EXPERIENCE

NVIDIA SMT ME AOI Intern
**Foxconn Fuyu Precision Component**
Apr 2026 - Jun 2026
Assisted in PCB defect verification and classification workflows.
Supported AI-based defect detection improvements for AOI inspection processes.
Collaborated with engineers on manufacturing quality-control procedures.

Gained experience in quality-control processes

## PROJECTS

**AOI PCB Defect Detection & Review Platform | Solo Project**
Completing thesis

- Built AI-assisted PCB inspection platform using FastAPI, React, PostgreSQL and YOLOv8.
- Designed defect review workflow inspired by industrial AOI systems.
- Trained and evaluated models on a custom PCB defect dataset (~2–3GB).
- Developed inspection logging and traceability features.

Role: ML Operations, Tester, Solution Architect
**V-Hand 2.0 – Smart Sign Language Glove | Team Size: 4**
Product completed
August 2025 - May 2026
A smart glove that translates hand gestures into synthesized speech using Machine Learning and embedded sensors.
**Awarded** First Prize at APEC Innovation 2025–2026 (National Level).

**RAInder: Images upscaling system using deep learning models | Solo Project**
In development with MVP-built
Integrated pre-train AI models like ESRGAN and optimizing the processing speed by NVIDIA triton.
